Consultation Response

Question 17 – Natural Environment

Policy NE5: Trees and Woodland

Supplementary Guidance: Trees and Woodland

The zone of influence should not be continued in the new LDP.

The existing Supplementary Guidance goes beyond the requirements of the Policy and takes a far more restrictive approach. Of particular concern in this regard is paragraph 8.4.2, in which it is stated that buildings and associated infrastructure (including garden ground) should generally be located outwith the “zone of influence” of existing or proposed trees. A tree’s zone of influence is defined as the distance equal to its mature height, measured from the base of the tree. In applying a blanket restriction on development within the zone of influence of all trees, regardless of the value of those trees, the Supplementary Guidance is at odds with the approach advocated in Policy NE5 imposing additional restrictions over and above those set out in the Policy itself. At the same time, this is also contrary to other existing guidance on tree protection measures referenced in the Supplementary Guidance.

The current Supplementary Guidance goes beyond providing further detail on the provisions of Policy NE5, but rather imposes additional restrictions which are neither advocated by the Policy itself nor consistent with the general approach taken within this.

The current Supplementary Guidance makes reference to relevant British Standards and other national guidance, but the provisions of the zone of influence are not consistent with any of the standards or guides.

The zone of influence concept is making development sites unnecessarily non-viable
