

Sustainability Guidance

Sustainability Guidance

Aberdeen City Council have committed to reducing carbon emissions, with net zero achieved by 2025, across all City Council assets and operations. This includes the parks and open spaces available to event organisers, who are encouraged to develop sustainable events. Event organisers should put plans in place to:

- Reduce
- Re-Use
- Recycle

Aberdeen City Council have recently committed to phase out single use plastics and event organisers are encouraged to review the single use plastic used at their events and to look for ways to reduce their use.

To assist event organisers, Zero Waste Scotland have produced a guide on planning and delivering environmentally sustainable events, which can be found [here](#).

Further information and advice can be found [here](#), as well as information on the resource efficiency pledge.
